Hiring Manager

HENNGE Engineering Talent Acquisition Team

Subject: Application for Backend/Global Internship Position

Dear Hiring Manager,

I am writing to express my interest in the Backend/Global Internship opportunity at HENNGE. After completing your backend challenge, I found myself not only focused on solving the problem, but also on understanding the engineering decisions behind secure system design. That experience strengthened my motivation to apply and contribute to a team that values thoughtful problem-solving.

I am currently a Computer Science Engineering student in India, actively building real-world applications. I have developed a role-based authentication system and a student management platform that is actively used by a school. These experiences taught me how to design systems that remain reliable as usage grows, and how to prioritize correctness and maintainability in production environments.

While implementing RFC6238-based TOTP using HMAC-SHA512, I approached the problem recursively due to constraints on explicit looping. This helped me improve how I reason about transformations and edge cases in algorithm design. In my authentication system, I prioritized secure token handling over speed, ensuring correctness in critical flows. I also designed the API to be stateless, enabling easier horizontal scalability.

What draws me to HENNGE is your culture of curiosity, continuous improvement, and strong engagement with open-source technologies. I enjoy learning how systems work at a deeper level, and I am particularly interested in working in a global engineering environment like Japan, where I can learn from diverse perspectives and grow both technically and professionally.

I am still early in my career, but I am highly motivated to learn, adapt, and contribute. I would welcome the opportunity to be part of HENNGE's engineering team and continue developing my backend expertise.

Thank you for your time and consideration.

Sincerely,

Yatharth Dubey
